

Johnson & Johnson Inc. - Markham, Ontario

The goal: to provide cover for employees and visitors of Johnson & Johnson Canada while they walk between the headquarters and the parking lots.

Project Brief:

Poligon was first contacted by an architect to create a corporate campus walkway cover after they saw similar walkway cover designs on poligon.com. At the time, we were unaware of the end client or the size of the project. A conference call was held with the architect, rep, and Poligon's sales and engineering teams to gather further information and details in regards to their vision and needs. After the initial discussion, a preliminary drawing of a section was made. Talks continued and after 4 revisions from the original design, everyone was in agreement. Poligon then presented color renderings to the architect. Soon after, the full scope of the project was revealed and Poligon was introduced to the general contractor - Varcon Construction.

Poligon engineers started talking regularly with the customer, along with the architect and GC. The design needed to accommodate a slope of almost 7' from headquarter entrance/exit to the parking lot. A revision was made to accommodate for colorful glass panels and how they were to be installed. The installer was then brought into the discussion and project scope to make sure they could execute the tight schedule and budget of the project.

The result was an 8' wide x 520' long walkway cover. The structure came in under budget and ahead of schedule. All the trades (steel, concrete, electrical, glass) worked with each other to help move the project along. Poligon made weekly calls up until the project shipped, then daily contact during installation. The end result was exactly what the customer needed and everyone was very pleased.

Customer Testimonial

"It's been my pleasure working with Poligon and its installer ABC Recreation to get this project completed in a very tight budget. With limited site storage and tight schedule to complete the work before winter, ABC Recreation and Poligon did what was necessary and beyond to meet the challenges."

-Jim Zhan, Project Manager, Varcon Construction Corporation.

Structures

Type: Walkway Covers
Colors: Ash Gray (frame)
Silver Metallic (roof)
Size: 8' x 520'

Features

- Colored glass panels (by others)
- Cantilevered design

Project Team

Client: Johnson & Johnson Canada
Poligon Rep: ABC Recreation
General Contractor: Varcon Construction

About Poligon®

At Poligon, we work along with you. Our sales, design, and engineering departments put your ideas down on paper and help make them a successful reality. We listen to your requests and make sure you get the highest quality product while staying within your budget. Merging your ideas and vision with our experience to create structures that unify quality with good design is our goal. No idea is too big or too small.
